## Projecting a Happy Retirement

A 2015 study found that 41% of households headed by someone aged 55 to 64 had no retirement savings, and only about a third of them had a traditional pension. Among households in this age group with savings, the median amount was just \$104,000.<sup>1</sup>

Your own savings may be more substantial, but in general Americans struggle to meet their savings goals. Even a healthy savings account may not provide as much income as you would like over a long retirement.

Despite the challenges, about 56% of current retirees say they are very satisfied with retirement, and 34% say they are moderately satisfied. Only 9% are dissatisfied.<sup>2</sup>

### ***Develop a realistic picture***

How can you transition into a happy retirement even if your savings fall short of your goals? The answer may lie in developing a realistic picture of what your retirement will look like, based on your expected resources and expenses. As a starting point, create a simple retirement planning worksheet. You might add details once you get the basics down on paper.

### Estimate income and expenses

You can estimate your monthly Social Security benefit at [ssa.gov](http://ssa.gov). The longer you wait to claim your benefits, from age 62 up to age 70, the higher your monthly benefit will be. If you expect a pension, estimate that monthly amount as well. Add other sources of income, such as a part-time job, if that is in your plans. Be realistic. Part-time work often pays low wages.

It's more difficult to estimate the amount of income you can expect from your savings; this may depend on unpredictable market returns and the length of time you need your savings to last. One simple rule of thumb is to withdraw 4% of your savings each year. At that rate, the \$104,000 median savings described earlier would generate \$4,160 per year or \$347 per month (assuming no market gains or losses). Keep in mind that some experts believe a 4% withdrawal rate may be too high to maintain funds over a long retirement. You might use 3% or 3.5% in your calculations.

Now estimate your monthly expenses. If you've paid off your mortgage and other debt, you may be in a stronger position. Don't forget to factor in a reserve for medical expenses. One study suggests that a 65-year-old couple who retired in 2015 would need \$259,000 over their lifetimes to cover Medicare premiums and out-of-pocket health-care expenses, assuming they had only median drug expenses.<sup>3</sup>

### Take strategic steps

Your projected income and expenses should provide a rough picture of your financial situation in retirement. If retirement is approaching soon, try living for six months or more on your anticipated income to determine whether it is realistic. If it's not, or your anticipated expenses exceed your income even without a trial run, you may have to reduce expenses or work longer, or both.

Even if the numbers look good, it would be wise to keep building your savings. You might take advantage of catch-up contributions to IRAs and 401(k) plans, which are available to those who reach age 50 or older by the end of the calendar year. In 2016, the IRA catch-up amount is \$1,000, for a total contribution limit of \$6,500. The 401(k) catch-up amount is \$6,000, for a total employee contribution limit of \$24,000.

Preparing for retirement is not easy, but if you enter your new life phase with eyes wide open, you're more likely to enjoy a long and happy retirement.

# ***Can I make charitable contributions from my IRA in 2016?***

**Yes**, if you qualify. The law authorizing qualified charitable distributions, or QCDs, has recently been made permanent by the Protecting Americans from Tax Hikes (PATH) Act of 2015.

You simply instruct your IRA trustee to make a distribution directly from your IRA (other than a SEP or SIMPLE) to a qualified charity. You must be 70½ or older, and the distribution must be one that would otherwise be taxable to you. You can exclude up to \$100,000 of QCDs from your gross income in 2016. And if you file a joint return, your spouse (if 70½ or older) can exclude an additional \$100,000 of QCDs. But you can't also deduct these QCDs as a charitable contribution on your federal income tax return—that would be double dipping.

QCDs count toward satisfying any required minimum distributions (RMDs) that you would otherwise have to take from your IRA in 2016, just as if you had received an actual distribution from the plan. However, distributions (including RMDs) that you actually receive from your IRA and subsequently transfer to a charity cannot qualify as QCDs. However, this would be a bit more cumbersome and possibly more expensive. You'd include the distribution in gross income and then take a corresponding income tax deduction for the charitable contribution. But the additional tax from the distribution may be more than the charitable deduction due to IRS limits. QCDs avoid all this by providing an exclusion from income for the amount paid directly from your IRA to the charity. You don't report the IRA distribution in your gross income, and you don't take a deduction for the QCD. The exclusion from gross income for QCDs also provides a tax-effective way for taxpayers who don't itemize deductions to make charitable contributions.

# ***Can I name a charity as beneficiary of my IRA?***

**Yes**, you can name a charity as beneficiary of your IRA, but be sure to understand the advantages and disadvantages.

Generally, a spouse, child, or other individual you designate as beneficiary of a traditional IRA must pay federal income tax on any distribution received from the IRA after your death. By contrast, if you name a charity as beneficiary, the charity will not have to pay any income tax on distributions from the IRA after your death (provided that the charity qualifies as a tax-exempt charitable organization under federal law), a significant tax advantage.

After your death, distributions of your assets to a charity generally qualify for an estate tax charitable deduction. In other words, if a charity is your sole IRA beneficiary, the full value of your IRA will be deducted from your taxable estate for purposes of determining the federal estate tax that may be due. This can also be a significant advantage if you expect the value of your taxable estate to be at or above the federal estate tax exclusion amount (\$5,450,000 for 2016).

Of course, there are also nontax implications. If you name a charity as sole beneficiary of your IRA, your family members and other loved ones will obviously not receive any benefit from those IRA assets when you die. If you would like to leave some of your assets to your loved ones and some assets to charity, consider leaving your taxable retirement funds to charity and other assets to your loved ones. This may offer the most tax-efficient solution, because the charity will not have to pay any tax on the retirement funds.

If retirement funds are a major portion of your assets, another option to consider is a charitable remainder trust (CRT). A CRT can be structured to receive the funds free of income tax at your death, and then pay a (taxable) lifetime income to individuals of your choice. When those individuals die, the remaining trust assets pass to the charity. Finally, another option is to name the charity and one or more individuals as co-beneficiaries. (Note: There are fees and expenses associated with the creation of trusts.)

The legal and tax issues discussed here can be quite complex. Be sure to consult an estate planning attorney for further guidance.
